Estimated Age of New York Black Bears Harvested in 2021

The table below lists the estimated ages of black bears taken by hunters in 2021. All hunters who reported their harvest and submitted an incisor tooth from the bear should have received their 2021 Black Bear Management Cooperator Patch in the mail and will find the age information of their harvested bear below.

We would like to thank you for your patience as we worked to get age information available to you. This year, we utilized a new company to analyze and determine the age information for bear teeth that we received from hunters during the 2021 big game hunting season. This process took longer than we anticipated, and we had to re-evaluate the results that we received. Please be aware that because of the analysis issues experienced this year, we have lower confidence with the precision of these data and recommend that you consider the age listed below as being approximate, ± 1 year. You will need your Hunter ID (backtag) and/or carcass document number to find the age of the bear that you harvested during the 2021 hunting season.

Hunter ID # (back tag)	Bear Tag #	Bear Age
100880000298	210200318581	1.75
